

Harris School Solutions has an issue tracking system, named JIRA, to monitor program enhancements and defects. You are able to reference these issue numbers through FreshDesk. The WEB numbers refer to the issues in JIRA that were resolved in this release.

Note: Issues marked with two asterisks (**) will be described more completely in technical notes available on the FreshDesk website.

To submit an idea for product enhancements/improvements, click [here](#).

New Features

Admin > Admin > Data Management

- Staff I/O > Staff Import Defn: Added new W4 fields. WEB-3093
- JDox Modules: Added a beta feature to improve exchange of metadata between WebSmart and JDox. This feature tracks changes to mapped metadata such as changing the vendor or ship to information on a PO, names on student or staff record, etc. When changes to data such as this are made, the Event Log starts a job to sync the data. This feature ensures updated metadata, accurate searches, and preserves the linkage between the document and record to which it was uploaded. WEB-3086
 - This feature is driven by changes to objects with mapped metadata ONLY and does not consider additional properties, objects, or data out of that scope.
 - The JDox Metadata Sync Event Handler must be turned on in Admin > Automation > Event Handlers in order to use this feature.

Students > Reports

These new reports are the result of user requests.

- ESPED Frontline: Added this new extract that includes the following fields not included in the ESPED Extract — student language code, student language text, current year days absent, current year days present, current year total # of incidents, current year # that resulted in removal from class, vision screen date, vision with glasses, hearing screen date, hearing result, far right 20, far left 20, near right 20 and near left 20. WEB-2729
- Imagine Math: Added this new extract with extract types of schools, students, teachers, and classes. WEB-2704
